

For the purpose of this letter, the actual name has been replaced with “Candidate”.

Dear Admissions Committee,

I am writing this letter of recommendation as Candidate’s teacher for IB Mathematics: Analysis and Approaches HL at the [School Name], where I have taught them for the past two years. This course demands a strong foundation in abstract reasoning and sustained independent study, and Candidate has approached the subject with the consistency and discipline required for success. Throughout both Year 12 and 13, their performance has placed them among the more reliable and well-prepared students in the cohort, demonstrated by their steady scores in our weekly problem sets and term assessments.

Candidate also participates actively in the wider school community. They have been a member of our school’s STEM Research Club, where they assisted in preparing the school’s entry for the 2023 Dutch Young Researchers Competition. Earlier this year, as part of the CAS requirement, Candidate volunteered at the Homework Support Centre, providing mathematics assistance to younger students. Their work there has been consistent and well-received, and the feedback from the centre’s coordinator has been positive regarding Candidate’s patience and clarity of explanation.

In general, Candidate conducts himself maturely and approaches academic tasks with a steady and methodical attitude. I am confident that Candidate has the preparation and study habits required for success in your undergraduate programme. Please feel free to contact me should you require additional information.
