

For the purpose of this letter, the actual name was replaced with “Candidate”.

To whom it may concern:

It is a great pleasure to recommend Candidate for admission to your graduate program. I was his professor from Mathematics 1 and Mathematics 2 during the first year of his bachelor's degree.

Candidate is currently in the final year of the International Bachelor of Economics and Business Economics (IBEB) and throughout his whole academic path he was showing excellent academic abilities. His hard-working mentality and strong mathematical background resulted in him obtaining a grade of 8.9 for Mathematics 1 and 8.8 for Mathematics 2 what placed him among the best students of these courses. Furthermore, he also showed an outstanding performance in other disciplines what is indicated by him achieving a Cum Laude award for his first year of studies, making him one of the top performing students of the whole program.

During his time at the university he also found time to improve his social and communication skills by becoming an active member of the Eastern European Students Association (EESA) and the Erasmus Volley association. Next to that he decided to furtherly improve and share his knowledge and became a Teaching Assistant for the course of Mathematics 1. During his time as a TA he was responsible for preparing and conducting tutorial classes and checking midterm and final exams of first-year students. His ability to explain various mathematical problems shows his outstanding understanding of the subject and proves his general quantitative proficiency. Additionally, he became a tutor from Microeconomics where his main duties were to conduct weekly recap sessions, as well as exam preparatory classes.

Seeing that Candidate is currently excelling at Erasmus University, I have no doubt that he will be able to replicate this outstanding performance at your university. His passion for mathematics and ability to perform under tight schedule and pressure make him a perfect candidate for this position.
