

For the purpose of this letter, the actual name has been replaced with “Candidate”.

As a Team Leader of the Data Insights Unit at Nordex Analytics, I am writing this letter to recommend Candidate, who completed a three-month summer internship under my supervision. During this period, Candidate worked within our Market Intelligence subgroup, a small team responsible for producing weekly analytical briefs for our clients. Although this was Candidate’s first experience in a professional analytics environment, she adapted quickly to our workflow and demonstrated a steady, reliable approach to assigned tasks.

Candidate’s primary responsibility involved supporting our project on forecasting short-term electricity-demand in the Nordic region. They assisted with data cleaning and documentation, produced initial visualisations in Python, and helped prepare the background section of the final client report. One of Candidate’s contributions, the automation of a repetitive dataset-merging step, reduced our processing time by roughly 20% for that task. While this was a relatively small component of the overall project, it reflected an ability to identify inefficiencies and propose practical improvements, which I consider a valuable skill in early-career analysts.

In addition to technical tasks, Candidate participated actively in team discussions and weekly sprint meetings. They asked clear, concise questions when unfamiliar with a concept, which helped ensure accuracy in their work rather than rushing through assignments. Their written communication improved noticeably over the course of the internship, and they handled feedback constructively.

Candidate conducted themselves professionally, met deadlines consistently, and demonstrated an ability to work effectively in a structured, collaborative environment. Although their internship was relatively short, I observed steady development in both technical confidence and communication skills. Based on their performance in our team, I believe Candidate is well prepared for further academic responsibilities and will be a great addition to your Master’s course. Should you require additional information, I would be happy to provide it.

Best regards
