

Dear Admissions Committee,

In this letter I would like to recommend Candidate for his application to the MSc Theoretical Physics programme at the University of Edinburgh. I am an Associate Professor of Physics at the University of Science in Kraków and I taught Candidate in *Quantum Mechanics II* and *Statistical Physics*, and supervised their final-year research project. Over this period, I have been able to observe Candidate's analytical abilities, approach to abstract reasoning, and determination.

Candidate's bachelor thesis, titled on quantum tunnelling demonstrated careful methodology and a solid grasp of advanced formalisms. They implemented a Monte Carlo sampling routine to approximate transition amplitudes and compared these with semiclassical estimates, producing results that were consistent and clearly presented. This project showed strong technical discipline and an ability to work through complex derivations without resorting to superficial explanations. It was also among the top 20 best bachelor theses of that cohort.

During his time in our department, Candidate was also very active in the academic life of the university. He attended most of our weekly *Theory Group Seminars*, including talks about instanton methods, non-Hermitian models, and stochastic quantisation. He also joined the student *Analytical Methods Circle*, where he often helped colleagues with more difficult parts of integration and differentiation. Altogether, these activities show that Candidate did not only follow the official requirements, but really became a part of our theoretical physics community and always tried to push his understanding further.

I am very satisfied with the work that was provided by the Candidate during our time of collaboration. Based on his performance in advanced physics modules and their demonstrated research ability, I am confident that Candidate is well prepared for the demands of the MSc Theoretical Physics at the University of Edinburgh.
