

What demonstrates your sincere interest in the programme you are applying for?

During the entire course of my previous education, especially my bachelor's degree, I was constantly trying to deepen my economic and quantitative knowledge. However, I always felt that neither my master's degree, nor my future employment choices will be purely business oriented. I always felt more attracted to the mathematical approach behind various economic theories, and therefore, courses such as Statistics, Mathematics, and Microeconomics were the ones that intrigued me the most during my undergraduate studies. The analytical part of business has always been my main field of interest, and I hope to continue developing in that area.

Since the financial industry is rapidly changing and constantly increasing its implementations of technological instruments, I believe that this program's emphasis on programming and software-based skills will be of extremely high importance. That was one of the decisive factors for my choice, as this is the area that I highly enjoy and have significant experience in. Still, I would love to furtherly develop these skills to satisfy the needs of my future employers. For that reason, I am certain that the program of Business Analytics and Management will be a perfect choice for me, as it will allow me to significantly improve my analytical knowledge and teach me how to apply it to the rapidly changing financial world.

How do you expect the programme you are applying for to contribute to your future plans? *

Trying to apply the knowledge I gained at my university, I decided to take up an internship position at Whale Bay & Co, a financial valuations company. This position helped me gain valuable work experience, as I was able to use my mathematical skills to perform financial and market analyses. The time that I spent there reassured me that a career in this field is what I want to pursue, but also showed me the importance of analytical and software-based skills in this industry. For that reason, I am extremely excited about courses like Machine Learning & Learning Algorithms, or Advanced Statistics & Programming.

Having a strong educational background is crucial for a successful career as an analyst, however soft skills are also an essential part of this job. Various financial models and pricing or trading strategies very often need to be explained to the team of salesmen or clients, who very often have less quantitative knowledge. That is where the purely business-related part of this program will be crucial, as it will help its student develop the skills necessary to explain and communicate the results to the stakeholders. Additionally, a thesis internship is also extremely appealing, since it allows students to have a direct contact with various companies before graduating.

How do you plan to contribute to the school motto "A force for positive change"?

The main idea behind the motto "A force for positive change" is that each student will do his best to contribute not only to the university's community, but to the broader challenges that the world is currently facing. Our economic and ecological problems are commonly known and understood, however, one may think that his own contribution to solving these issues will be too small to make an impact. School's motto encourages its students that it is them that need to make a change in the world, and that through dedication, cooperation, and critical thinking it is possible to overcome these immense problems.

I believe, that the essence of this statement has followed me throughout my whole life and highly affected my personality. I have always had extremely high expectations from myself and I knew that through hard work and dedication anything is possible. Very often people underestimate their own value and the contribution they bring to the society. Constantly challenging ourselves and placing confidence in our abilities is essential to help us resolve the problems that the world is currently having. That is what I proudly believe in and I am hoping to inspire others to follow the same path, as our own efforts are invaluable, but it is our collective work that will help us face our current challenges and shape the future of the world.

What other relevant information do you want to share with us in order to motivate your application?

My application for this program is triggered by my constant willingness to step out of my comfort zone and push myself into the unknown. Following the course of business analytics will be extremely demanding, but it will also be a major addition to my current skillset. I am not worried about my ability to face the rigorous nature of the program, as I always felt very comfortable with working under pressure in a quantitatively-intensive field, what is proven by my outstanding previous academic achievements.

I am also aware that Erasmus University puts a strong emphasis on the international environment and hopes that its students will be able to contribute to the global community of the school. Having spent the last four years studying abroad, combined with my previous studies in an international school in Poland, assures me that I will be able to fit in well with the diverse group of students.

A constant pursuit of intellectual growth helped me develop excellent work ethics and time management skills. Being one of the top performing students at my current course, as well as my ambitious personality, makes me certain that I am a perfect candidate for this program. I am determined to contribute to your community with a mind open to new ideas and motivation to become an expert in Business Analytics and Management.
