

My journey towards a career in medicine has been a deliberate and thoughtful process, evolving over several years rather than a hasty decision. Since my early days in secondary school, I've harbored a profound fascination with the intricate mechanisms that govern human existence. This passion propelled my excellence in Biology and solidified my determination to pursue medicine.

My quest for medical knowledge led me to participate in "Doctors of Tomorrow," a school initiative aimed at exploring the complexities of the medical field. Engaging in various activities and attending medical conferences, I gained insight into the rigorous coursework doctors undertake to stay current. Obtaining Basic Life Support Accreditation heightened my ability to make crucial decisions under immense stress, providing a glimpse into the challenges and rewards of the medical profession.

Shadowing experienced healthcare professionals in a local hospital further reinforced my desire to pursue medicine. Observing the doctors in the Emergency Department, I witnessed the perpetual urgency they faced and the profound trust placed upon them by patients. The doctor-patient relationship emerged as a crucial, often overlooked aspect of medicine, emphasizing the importance of effective communication and empathy.

Participation in Model United Nations (MUN) and rugby at school honed my administrative and empathetic skills, preparing me for patient interactions. MUN expanded my critical thinking and diplomatic prowess, essential qualities for effective communication with patients. My experience as a prefect within the school community further strengthened my leadership and teamwork skills, highlighting the value of trust, honesty, and integrity.

My volunteer work at an old people's home, interactions with residents with dementia, and exposure to neurological diseases through reading Oliver Sacks' "The Man Who Mistook His Wife for a Hat" inspired my commitment to caring for and treating patients. My overseas experiences in Malawi, witnessing the devastating effects of HIV/AIDS, kindled a desire to contribute to research in this field.

In preparation for my medical journey, I'm currently working as a Healthcare Assistant (HCA) at a local hospital and will soon embark on a teaching expedition in rural China. My diverse experiences in science and leadership, coupled with a passion for lifelong learning, have solidified my pursuit of a career in medicine, where I aim to unravel the mysteries of human health and contribute to the betterment of society. I am eager to explore research opportunities in the field of neurology, driven by a desire to understand and address the challenges posed by neurological conditions.
