

Psychology, the systematic exploration of human behavior through empirical research and theory, has always been my driving passion. It is a discipline that seeks to unravel the intricacies of our thoughts, emotions, and actions, ultimately equipping us to understand, manage, or enhance specific behavioral patterns.

My particular interest lies in cognitive psychology, where I have explored the profound impact of cognitive abilities on our behavior. During my A-level studies, I delved into Piaget's theory of cognitive development, a cornerstone of educational practices. However, I also encountered research challenging Piaget's discrete stages, suggesting a more continuous cognitive growth pattern.

This experience has taught me the importance of not relying solely on a single theory and embracing multiple perspectives to gain a comprehensive understanding of human cognition. My coursework in English Literature, Psychology, and Sociology has honed my analytical and evaluative skills, enabling me to critically assess and present arguments effectively.

Active participation in the Peer Support Group at school has further refined my networking skills and equipped me to address personal and academic challenges faced by fellow students. My engagement in the Borneo Global Issues Conference VII, a United Nations conference simulation, broadened my horizons, exposing me to diverse cultures and viewpoints, enriching my ability to comprehend and adapt to varying worldviews.

As a school representative, I engaged in discussions about global issues and resolutions, learning to articulate my ideas effectively and engage with influential figures. A dialogue session with his Royal Highness Prince Azim provided a unique opportunity to voice concerns about social issues among youth and the education system in our country.

Looking ahead, I aspire to teach Psychology, instilling in students the understanding that human behavior is not mere common sense but a phenomenon rooted in scientific theories. Ultimately, my goal is to become an Educational Psychologist, dedicated to designing strategies that enhance student performance and well-being, grounded in a deep understanding of human behavior.
