

For the purpose of this letter, the name has been replaced with “Candidate”.

To whom it may concern,

It is a pleasure to recommend Candidate for the course of Medicine at Fudan University. I have been her chemistry HL professor through the duration of her IB (two years) and, in that time, I have grasped Candidate's fast conceptualisation ability and sheer dedication to her studies.

Candidate is a highly achieving student. In Chemistry, and indeed in most of her other subjects, including Biology and Psychology, she is on the path of achieving a high 5/6 in HL - placing her strongly amongst the highest performing students of her cohort. She is an enthusiastic, determined, and hard-working student that has become a pleasure to teach. She does not shy away from difficult concepts and is a natural leader in practicals and lab work. Most recently, she has shown innate curiosity in neutralisation processes, an experiment which we have been practicing in the lab in our modules of acids, alkaline, and their reactions. Her report on the experiment was superb, showing understanding and analysis skills as well as the ability to apply concepts to the bigger picture.

Outside the classroom, it is clear to me that Candidate possesses all the soft skills required to be a compassionate and empathetic doctor. She is highly sociable with her peers, even forming part of a 'homework group' where she helps other students with the schoolwork they may be struggling with. Even further, as part of the volunteering part of the curriculum, Candidate spent time in the local hospital and an infant hospice. Here she provided company and support to both patients and staff as well as showing her dedication to a career in medicine.

Candidate's choice of course is well-founded and perfectly suitable to her intellectual ability, soft skills, and interests. Her analytic mind and people's skills are the desired combination of toolsets held by the doctors of tomorrow. I am beyond confident that she will be a great contribution to the Faculty of Medicine at the Fudan University and will carry her degree with curiosity, enthusiasm, and discipline.
